

MRI Brain Without Contrast · Synthetic Demo Report

Educational sample only · synthetic demo, not a real patient report.

EXAM:

MRI of the brain without intravenous contrast.

CLINICAL HISTORY:

New headaches. Rule out intracranial mass.

TECHNIQUE:

Multiplanar T1, T2, FLAIR, and diffusion-weighted sequences were obtained.

COMPARISON:

None available.

FINDINGS:

No acute infarct, hemorrhage, or mass lesion. Ventricles and sulci are age-appropriate. No abnormal extra-axial collection. Orbits and visualized paranasal sinuses are unremarkable. No restricted diffusion.

IMPRESSION:

Normal MRI of the brain without contrast.

RECOMMENDATIONS:

Clinical correlation.
